

Alterations of the intestinal flora?

LineaFlor

A range of products for a balanced
and efficient intestinal microflora.

Quality, Efficacy, Guarantee.

Think Green. Live Green. Be Green.

A healthy and balanced intestine
- integral and efficient intestinal microflora.

Balance (Intestinal Eubiosis):

Active intestinal microflora = barrier function against the adhesion of bacteria to intestinal mucus and other important beneficial actions

alterations, intestinal unbalance (Dysbiosis)

possible proliferation of pathogenic bacteria

- gastro-intestinal disorders
- bloating
- abdominal pain
- flatulence
- digestive problems

additives with adequate, valid probiotics

re-enforces the activity of the intestinal mucus barrier and the immune system, associated with intestinal Eubiosis

From the Erba Vita laboratories comes the new Flor Line.

New probiotic, species-specific strains selected based on scientific evidence.

THE MAIN ACTIONS of the new FermentFlor Plus® mix, with a typified probiotic base:

- Inhibits growth of pathogenic micro-organisms.
- Stimulates immune defence mechanisms against infections.
- Increases the production of enzyme activity and protective antibodies to assist the release of defensive bio-substances, at intestinal mucus level.
- Supports the formation of colonies that are renewed for many generations on the walls of the intestine.
- Inhibits the production and activity of the pathogenic enterotoxins.
- Stimulates the biosynthesis of complex B vitamins.
- Detoxifies by breaking down dangerous amines and decreasing the activity of harmful enzymes.

- **NO LACTOSE**
- **NO GLUTIN**
- **NO ALLERGENIC SUBSTANCES**

TYPIFIED PROBIOTIC STRAINS

- **FERMENTFLOR PLUS® MIX:**
 - *Lactobacillus plantarum* 14 D
 - *Lactobacillus acidophilus* LA1
 - *Bifidobacterium a. lactis* Bi1
 - *Lactobacillus rhamnosus* LR1
- **Bifidobacterium infantis Bi08:**
specifically selected for microflora in children
- **Saccharomyces boulardii CNCM-I-1079:**
indispensable in case of diarrhoea

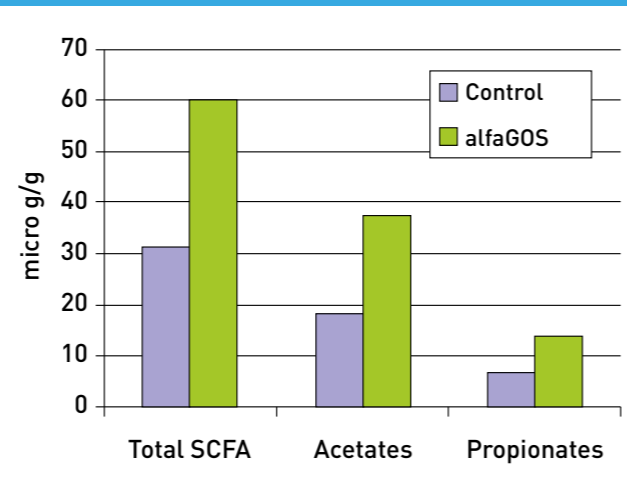

AlfaGOS

- The best natural functional bio-regulators in the gastro-intestinal eco-system.
- Prebiotic fibre fermented and used preferentially by important and beneficial probiotic populations in the human intestine.

AlfaGOS are composed of sugars bound through natural enzyme synthesis. The human body is not equipped with the necessary enzymes to separate (hydrolyse) such bonds, therefore it cannot digest these substances. For this reason, they cannot be assimilated, but are used by the beneficial local intestinal flora to stimulate its development.

The production of short chain fatty acids (SCFA) - that take place in the human being important physiological and biochemical - is favored by the presence of prebiotic alfaGOS compared to other types of prebiotics (Control)

The graph shows how at intestinal level the production of short chain fatty acids (total SCFA) and the individual SCFA, Acetates and Propionates - important for muscles, the heart and the brain, for gluconeogenesis and intestinal cell replenishment - is much greater when the prebiotic used is alfaGOS compared to other types of prebiotics (Control).

Flor Line: why choose it?

- Allergen-free FermentFlor Plus® mix.
- Typified enteric strains (characterised by the taxonomic identification defined by DNA analysis), in compliance with standards, and deposited in European strain collections.
- Probiotic mixes safe for the human body.
- Natural resistance to stomach acidity.
- Highly compatible with the enteric environment and high capacity of adhesion to intestinal wall.
- Broad intrinsic antibiotic-resistance spectrum.
- Competitive antagonism towards pathogenic bacteria.
- Increased immune response.
- AlfaGOS: the best prebiotic bio-regulator in the gastro-intestinal eco-system.
- Formulas enriched with B group vitamins.
- Easy to take in any form.
- Formulas suitable for all needs.

FERMENTFLOR FORTE orosoluble sachets

Practical formulation to quickly restore intestinal microflora.

- Highly stressed intestinal bacterial flora.
- Treatment with antibiotics.
- Dietary imbalance.
- Diarrhoea from different sources.

Contains:

- FermentFlor Plus® Mixture
- AlfaGOS
- B group Vitamins

Suggested use: 1-2 sachets a day.

Content: 10 orosoluble sachets

10 BILLION PER DAY
live and active
milk ferments

No artificial sweeteners.

FERMENTFLOR FORTE bottles

Re-establishes intestinal regularity in just a few days.

Strong support in imbalanced situations.

- Heavy stress and intestinal dysbiosis.
- After antibiotic therapies, with deep alterations in local microflora.
- Excellent coadjuvant in bacillary diarrhoea and diarrhoea of viral origin.
- Intestinal disorders where the mucus has reduced enzyme activity.

Contains:

- FermentFlor Plus® Mixture
- AlfaGOS
- B group Vitamins

Suggested use: 1-2 bottles a day.

Content: 10 bottles
20 bottles

12 BILLION PER DAY
live and active
milk ferments

No artificial colourings or sweeteners.

STRONG SUPPORT IN DYSBIOSIS

FERMENTFLOR capsules

Re-balances intestinal bacterial flora for long term integration.

- Slight daily alterations in intestinal bacteria flora.
- Intestinal dysbiosis with a sluggish intestine.

Contains:

- FermentFlor Plus® Mixture
- AlfaGOS
- Inulin
- B group Vitamins

Suggested use: 1-2 capsules a day.

Content: 20 capsules DRcaps®

4 BILLION PER DAY
live and active
milk ferments

Acid-resistant capsules

BOULARDIIFLOR capsules

To quickly combat "attacks" of various origin in the gastroenteric tract.

For episodes of diarrhoea that also occur during antibiotic therapies or as a natural defence against pathogenic bacteria.

- Severe diarrhoea of various origins (viral, bacterial).
- Traveller's diarrhoea (both as a preventive action and during the acute phase).
- Coadjuvant of antibiotic treatment (before, during and after).
- Systematic Candidiasis, of the gastroenteric tract and localised (e.g. vaginal candidiasis).
- Dietary intolerance and delayed-onset food allergies.

Contains:

- Saccharomyces boulardii
- Inulin
- B group Vitamins

Suggested use: 1 capsule a day with a lot of water.

Content: 15 capsules DRcaps®

5 BILLION PER DAY
live and active
milk ferments

Acid-resistant capsules

FERMENTFLOR JUNIOR bottles

Specific formulation for annoying illnesses in children.

Pleasant taste for children's needs.

- Sluggish intestine.
- Antibiotic therapies.
- Diarrhoea and dietary imbalance.
- Bloating and abdominal colic.

Contains:

- FermentFlor Plus® Mixture
- AlfaGOS
- Bifidobacterium infantis
- B group vitamins

Suggested use: 1-2 bottles a day.

Content: 10 bottles

10 BILLION PER DAY
live and active
milk ferments

No artificial colourings
or sweeteners.

JUNIOR

CARBONFLOR capsules

Combats intestinal gas formation and stimulates its elimination from the body.

- Meteorism and abdominal bloating.
- Digestive problems.
- Dietary imbalance.
- Post-prandial heaviness.

Contains:

- activated charcoal
- Digestive enzyme (Bromelin)
- Lactobacillus acidophilus
- Carminative herbs, eueptic and digestive (Fennel, Anise, Angelica, Caraway, Lemon Balm, Pineapple, Yellow gentian)

Suggested use: 2-3 capsules a day.

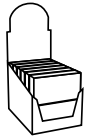

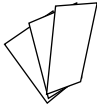

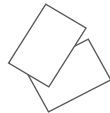

Content: 30 capsules VCAPS®

WITH ACTIVE CARBON.
